DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 16 January 2007 has been entered.

Allowable Subject Matter

2. Claims 1-8, 10-18, and 20-25 are allowed.
3. The following is an examiner's statement of reasons for allowance: the examiner agrees with the applicant regarding the novelty and non-obviousness of the invention.
4. The invention is drawn to an intermediate device connecting a plurality of clients to a plurality of servers, such that the intermediate device routes HTTP requests to the correct socket on the correct server, utilizing agents in a particular method drawn in each independent claim.
5. By contrast, the art teaches that intermediate devices that perform this functionality, i.e. for load balancing or quality of service reasons, does not also determine which socket to connect on the selected server, but rather each server has a socket devoted to HTTP requests. As such, the method of identifying at least two of the server TCP connections to perform this multiplexing task is novel and non-obvious.
6. All independent claims have the novel combination. All dependent claims inherit the combination.
